

META ADS PERFORMANCE REPORT

Campaign: Reel – New Sales Campaign (26-10-25)

Reporting Period: 5 Nov 2025 – 19 Jul 2026

Client: Make of Welding | makeofwelding.com

1. Executive Summary

This report consolidates performance data for the “Reel – New Sales Campaign (26-10-25)” running on the Reel New Sales Ad Set, targeting website purchases (Sales objective). Data spans two reporting windows pulled from Meta Ads Manager: Period 1 (5 Nov – 31 Dec 2025) and Period 2 (1 Jan – 19 Jul 2026), plus a daily reach/impressions breakdown covering 12 Oct 2025 through 8 Jul 2026.

Across both periods combined, the campaign spent ₹15,254.19, reached a combined 170,173 people, generated 253,327 impressions, and delivered 246 website purchases. Cost efficiency improved meaningfully in Period 2 — cost per result dropped from ₹72.12 to ₹59.62 (–17.3%) and CPC fell from ₹2.86 to ₹2.46 (–13.9%), indicating the campaign matured and became more cost-efficient over time.

Key Metrics at a Glance

Metric	Period 1 (Nov–Dec 2025)	Period 2 (Jan–Jul 2026)	Combined
Reach	40,155	130,018	170,173*
Impressions	51,870	201,457	253,327
Frequency	1.29	1.55	–
Results (Website Purchases)	47	199	246
Amount Spent (INR)	₹3,389.82	₹11,864.37	₹15,254.19
Cost per Result	₹72.12	₹59.62	₹61.99 (avg)
CPC (Cost per Link Click)	₹2.86	₹2.46	₹2.62 (avg)

*Reach is a de-duplicated metric within each period; combined reach is directional (some overlap possible), not a strict sum.

2. Ad Spend Overview

The total ad spend across the campaign lifetime is ₹15,254.19. Spend nearly tripled from Period 1 to Period 2 as the campaign scaled, while remaining efficient — cost per result actually improved despite the higher spend.

Figure 1: Amount Spent (INR) by Reporting Period

Results Delivered by Period

Figure 2: Website Purchases (Results) by Reporting Period

3. Cost Efficiency

Both key cost metrics — Cost per Result and CPC — trended downward from Period 1 to Period 2, a strong signal of creative/audience optimization and algorithmic learning taking effect as the ad set matured.

Figure 3: Cost per Result vs CPC — Period Comparison

- Cost per Result improved by ₹12.50 (~17.3%) from Period 1 to Period 2.
- CPC improved by ₹0.40 (~13.9%) from Period 1 to Period 2.
- Frequency rose slightly (1.29 → 1.55), still within a healthy range (no strong signs of audience fatigue).

4. Reach & Impressions Trend (Monthly)

Daily-level data was aggregated by month to visualize how audience reach and ad impressions evolved over the campaign's lifetime.

Figure 4: Monthly Reach & Impressions (Oct 2025 – Jul 2026)

Reach and impressions peaked in March 2026 and May 2026, and dipped notably in June and July 2026 — likely due to reduced delivery/budget pacing or ad set pauses toward the end of the reporting window (several single-digit-reach days appear on 8 Apr, 14 May, 14 Jun and 8 Jul, suggesting the ad set was briefly paused or nearly exhausted on those dates).

Monthly Reach & Impressions Table

Month	Reach	Impressions
Oct 2025	17,247	18,393
Nov 2025	25,100	26,284
Dec 2025	24,167	25,586
Jan 2026	28,756	31,859
Feb 2026	27,561	29,588
Mar 2026	31,876	34,728
Apr 2026	24,283	26,187
May 2026	31,851	34,557
Jun 2026	21,414	23,838
Jul 2026 (partial, till 8 Jul)	17,855	20,700

5. Key Insights & Recommendations

Insights

- The campaign has been running continuously since 16 Oct 2025 and remains active (“Ongoing”), with no end date set.
- Cost efficiency improved as the campaign scaled — a positive sign of successful optimization rather than typical scaling fatigue.
- Results (purchases) grew over 4x between the two periods (47 → 199), tracking closely with the rise in spend.
- Delivery has shown some volatility in recent months (Jun–Jul 2026), with a few near-zero delivery days that warrant a budget/status check.

Recommendations

- Investigate the near-zero-reach days (8 Apr, 14 May, 14 Jun, 8 Jul 2026) — confirm whether these were intentional pauses, billing holds, or ad set/account-level delivery issues.
- Given improving cost-per-result, consider a controlled budget increase to capture more volume while monitoring frequency to avoid ad fatigue.
- Test 2–3 new creative variants within the same ad set to sustain performance gains and offset the slight frequency increase.
- Set up a recurring monthly export of this data to track cost-per-result and CPC trends proactively rather than retrospectively.

6. Notes on Data Sources

This report was compiled from three Meta Ads Manager exports:

- Report 1: Campaign-level summary for the period 5 Nov 2025 – 31 Dec 2025.
- Report 2: Campaign-level summary for the period 1 Jan 2026 – 19 Jul 2026.
- Report 3: Day-by-day breakdown of Reach and Impressions from 12 Oct 2025 to 8 Jul 2026 (used for the monthly trend charts and table).

Note: Daily-level spend and results (purchases) were not available in the exported data, so spend/results figures are presented at the period level rather than a daily trend.
